

1. Write a Python program to calculate number of days between two dates. Hint: use Datetime package/module.

```
In [1]: from datetime import date
first_date = date(2014, 7, 2)
last_date = date(2014, 7, 11)
days = last_date - first_date
days
```

```
Out[1]: datetime.timedelta(days=9)
```

```
In [ ]:
```
